

CENTRAL INTELLIGENCE AGENCY
DECLASSIFIED DOCUMENT - ANOMALOUS
HISTORICAL ARCHIVES

Special Authorization: EO 13526 – Level
BLACK

Partial Declassification Date : ■■■■■/■■■/2015

DOSSIER NO: DRACO-KRK-1883

Code Name : DRACO PRIMUS

Associated Event : Krakatoa Eruption

Date: August 27, 1883

Location : Sunda Strait, Indonesia

Classification : PRE-NUCLAR BIOLOGICAL
CATACLYSM

EXECUTIVE SUMMARY

The Krakatoa eruption (1883), considered one of the most violent natural explosions in modern history, presents energetic and acoustic anomalies incompatible with classic volcanic activity.

Retrocactive CIA analyses suggest the intervention of an ancient biological entity, designated DRACO PRIMUS, a primitive form of the DRACO entity observed in the 20th century.

OBSERVED ANOMALIES

▲ Explosion Power
energy equivalent to several hundred
megatons
quasi-instantaneous destruction of the island
atmospheric shock wave recorded several times
around the globe
▲ Sound Anomaly
detonation heard over 4,800 km
intensity incompatible with a single volcanic
explosion
CIA Scientific Note (reconstruction):
"A volcano explodes. It does not roar."

CURRENT STATUS

DRACO PRIMUS: INACTIVE / IN
DEEP SLEEP
Probable location:
oceanic volcanoes
subduction zones
extreme magma chambers
Permanent Order:
NO DEEP EXPLORATION
AUTHORIZED

FINAL NOTE

"Before man created absolute fire, the Earth already had it."
