

CENTRAL INTELLIGENCE AGENCY
DOCUMENT DECLASSIFIED - BLACK VAULT
Special Authorization: EO 13526 – Section

Date of Partial Declassification: 2012
/2012

DOSSIER NO: DRACO-CHRN-86

Code Name: DRACO

Associated Event: Chernobyl Nuclear
Incident

Date: April 26, 1986

Classification : CATASTROPHIC

Access : OMEGA ONLY

EXECUTIVE SUMMARY

The explosion of Reactor No. 4 at the Chernobyl power plant is not solely of human origin.

Satellite, thermal, and seismic data indicate the intervention of an abnormal biological entity of the DRACO type in the hours preceding the incident. The official version (human error + RBMK defect) was deliberately simplified to avoid global panic.

POST-INCIDENT OBSERVATIONS

1986-1991: persistent thermal
anomalies

mutated animals: consistent with secondary
exposure

military flights diverted

no complete reactor exploration since
DRACO disappears from radar after the
explosion.

Estimated direction: east.

INTERACTION WITH THE REACTOR

Joint CIA/DARPA Analysis (1987):

DRACO is attracted by extreme
energy sources

the nuclear core acted as a biological
stimulus

defensive reaction of the entity:

uncontrolled thermal emission

brutal overload of the reactor

The initial explosion would be a chain
reaction, not the primary origin.

PRE-INCIDENT DATA (DECLASSIFIED)

♦ April 25, 1986 - 23:14

massive thermal anomaly detected at high
altitude

signature not compatible with aircraft or
missile

vertical descending trajectory

♦ April 26 - 00:47

local electro:germetic disturbance

total radio interference

Soviet operators report: "an immense
shadow above the reactor"

CIA ARCHIVE - CHERNOBYL - APRIL 26, 1986
